This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

**Usage guidelines**

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
+ *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
+ *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
+ *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

**About Google Book Search**

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. JANUARY 1, 1914.

*State Water Storage Commission, Augusta, Maine.*

GENTLEMEN: In accordance with the provisions of Public Laws, 1911, Chapter 170, I beg to submit the annual report of this Commission for the year 1913 and recommend its publication.

On the organization of the office, one of the first things started was a card catalog of the rivers, lakes and ponds of the State. The information is now in such detail that it is deemed advisable to publish it, as it is believed that it will prove of value to the people of Maine.

On account of the length of the gazetteer, other studies resulting from the investigations of the Commission will be held for the next report. These unpublished data include the monthly estimates of discharge for 1913 at the regular gaging stations in the State; tables showing the discharge in cubic feet per second per square mile arranged in the order of mangnitude, or duration tables, as they are sometimes called, of the rivers of the State for which daily discharge measurements are available. In the Third Annual Report, page 27, these duration tables or diagrams are described. Computations of the total power of the rivers of Maine are being made in the office of the Commission and will also be published later.

The assistants of the office have been Mr. George C. Danforth, Assistant Engineer, and Miss Elizabeth C. Spooner, clerk.

Very respectfully,

CYRUS C. BABB,

*Chief Engineer.*

# GAZETTEER OF THE RIVERS AND LAKES OF MAINE

In the study of the water resources of Maine, the State Water Storage Commission has divided the State into drainage districts as follows:

St. John River Basin.

St. Croix River Basin.

Coastal Basin No. 1, the drainage between the St. Croix River and Machias River and including the following streams: Little, Pemaquam, Dennys, Cathance, Little Falls and Orange rivers and various small tidewater streams.

Machias River Basin.

Coastal Basin No. 2, including the following streams: Chandler, Indian, Pleasant, Narraguagus, Tunk and Bagaduce rivers and various small tide-water streams.

Union River Basin.

Penobscot River Basin.

Coastal Basin No. 3, including the following streams: Goose, Wescot, Passagassawakeag, Duck Trap, Megunticook, St. Georges, Medomak, Pemaquid, Damariscotta and Sheepscot rivers and various small tidewater streams.

Kennebec River Basin.

Androscoggin River Basin.

Royal River Basin.

Presumpscot River Basin.

Saco River Basin.

Coastal Basin No. 4, including the following streams: Kennebunk, Mousam, York and Piscataqua rivers.

The gazetteer is arranged alphabetically by these drainage basins and has been compiled from the best maps available to the office of the State Water Storage Commission. For this purpose, the following have been used: The special lake and river maps as issued by this department and listed in the Third Annual Report, page 5; the regular topographic sheets of the U. S. Geological Survey; the township plans in the office of the

State Assessors; many private recent reservoir and township maps on file in this office; and, in a few cases, county atlases where more accurate maps were not available. The areas of the lakes and ponds were measured by planimeter from the maps in question. In the text, after the area of water surface of each lake and pond, there is given in parenthesis, the map authority from which it was measured, and one can thus judge of the accuracy of the measurement. There are many townships, especially in the wild land districts, of which no accurate maps are available, and some of the lake areas are undoubtedly in very considerable error.

The explanation of the abbreviations used is given below. They refer generally, either to the maps on which the lake areas were measured or to the original surveys of the State and indicated on many maps of the State.
